DEBAPRASAD SAHOO

Software Engineering Team Lead

Pune, Maharashtra | +91-7978355991 | sahoo.debaprasad.23@gmail.com

PROFESSIONAL SUMMARY

Result-oriented Software Engineering Team Lead with around 7 years of robust experience in designing, developing, and deploying enterprise-scale distributed systems and microservices. Proven expertise in Java (8 & 17), Spring Boot, Node.js, and event-driven architectures (Apache Kafka). Demonstrated success leading engineering initiatives, building intelligent automation frameworks, and collaborating with AI/ML teams to integrate LLM and inference workflows. Highly adaptable leader dedicated to driving operational efficiency, scaling cloud-native applications, and delivering clean, maintainable code.

CORE TECH SKILLS

- **Languages:** Java (8 & 17), Node.js, SQL, Python (Exposure)
- **Frameworks & Tools:** Spring Boot, JPA, Hibernate, Camunda, Kestra
- **Data & Caching:** PostgreSQL, Oracle Database, Valkey
- **Messaging & Integration:** Apache Kafka, REST APIs
- **DevOps & Cloud:** Docker, Kubernetes, Helm, GitLab CI/CD, Jenkins, Liquibase
- **Security & Compliance:** Twistlock, Checkmarx, Black Duck

PROFESSIONAL EXPERIENCE

AMDOCS | *Software Engineering Team Lead*
May 2021 – Present | Pune, Maharashtra

Project: ItOps (Intelligent Incident Automation Platform)

Built and contributed to an enterprise-scale platform designed to automate incident resolution workflows and reduce manual operational overhead.

- **Microservices Development:** Designed and developed highly scalable microservices using Java 17 and Spring Boot for real-time incident ingestion, orchestration, validation, and execution.
- **Connector Framework:** Implemented a robust connector framework to seamlessly integrate with multiple incident management systems including ServiceNow, BMC Helix, and CSV-based bulk data imports.
- **Event-Driven Architecture:** Developed asynchronous, event-driven workflows using Apache Kafka for incident lifecycle management, status propagation, and distributed execution tracking.
- **Automation Scripting:** Created and optimized automation scripts to handle infrastructure fixes, log collection, and system remediation tasks.

- **Data & Caching Layer:** Designed persistent storage solutions using PostgreSQL for metadata and workflow configurations; implemented high-speed caching with Valkey for frequently accessed automation rules and runtime states.
- **AI/ML Integration:**
    - **Collaborated with AI/ML teams** to integrate **ML inference services** and score pipeline confidence within the incident automation lifecycle.
    - **Built orchestration around LLM workflows** for context preparation (incident history, logs, previous fixes) and AI-assisted script generation workflows.
    - **Implemented HITL (Human-in-the-loop)** approval workflow integration for AI-generated remediations, creating an execution feedback loop for continuous model learning.
- **Business Impact:** Significantly improved the incident auto-resolution rate, reduced Mean Time to Resolution (MTTR), and increased zero-touch automation coverage for repetitive operational incidents.

Project: EMS & MetroX

- **API Performance Optimization:** Built modular microservices using Spring Boot and Node.js; standardized API designs and response formats to reduce integration times by 25% and boost performance by 40%.
- **Database Engineering:** Optimized PostgreSQL schemas and strategic indexing, reducing query latency by 50%. Automated database schema migrations by integrating version-controlled Liquibase changelogs into the CI/CD pipeline, reducing manual execution human errors by 99%.
- **DevOps & Security Automation:** Developed GitLab CI/CD pipelines and Helm charts using Nexus for artifact management. Proactively mitigated infrastructure vulnerabilities by 80% using Twistlock, Checkmarx, and Black Duck scans.
- **Core Feature Architecture:** Architected a global exception handler and custom data pagination in Spring Boot. Played a key role in delivering high-impact modules like the Hand-Off feature, Environment Dashboard.

YUSATA INFOTECH PVT LTD | *Java Developer*
Aug 2019 – May 2021 | Jaipur, Rajasthan

Project: YLogApp 2.0 (Fleet Management Application)

- **API & Feature Integration:** Integrated multiple third-party telematics and fleet APIs to fetch, store, and visualize real-time fleet operations data on a unified dashboard.
- **Bulk Data Engine:** Engineered a high-throughput bulk entity creation engine capable of parsing large Excel datasets and automatically populating system architectures.
- **Geospatial Alerts:** Implemented geofence tracking and automated alert mechanisms utilizing the Google Maps API to enhance real-time asset tracking.
